Dedicated server for all editions	price in €
With the application of a dedicated server, the sessions are, independent of the fastviewer servers, processed on your own server. If you need more information regarding this, please request our information about server specification at <a href="mailto:info@fastviewer.com">info@fastviewer.com</a> .	990.-

### Service scope (from version 2.5 on)

You can refer the complete scope of services of the individual editions in the current achievement matrix on the fastviewer website ([www.fastviewer.com](http://www.fastviewer.com)) and/or download it at the range download in the subitem documentation.

## General Information about our price list

- The software of the PR, EN, RE, CO and CL includes in each case the fastviewer master module and the fastviewer customer module. The master module can be started by as many different workplaces as desired, it will not be installed and there will not be remained any arrears on the PC. The customer module can be distributed completely freely. The access to the portal for the customizing of the software is included in the list price. No further operating fees are incurred.
- At the temporally unrestricted version and the monthly version only the number of parallel sessions are counting. The monthly version is temporally limited on 31 days. The achievements of the software maintenance and support contract are included in the price of the monthly version.
- At the hourly version as many parallel sessions as desired can take place, only the time in the minute intervals are counting (an active session will NEVER be aborted on our part, even if the time account is used up). The time account can be scanned and charged at any time at the personal customer portal. Loadings are immediately active, afterwards you receive an invoice concerning this. The time account does not have to be used up within a certain time. The smallest loading unit amounts in each case 10 hours. Contrary to the renting/full license at the hourly version a reduced connecting log is available. The achievements of software maintenance and support contract are also included in the hourly version price.
- The fastviewer remoted (RE) becomes licensed after the number of clients, since the remoteclient is installed as service and thus the online computers are permanently available. Additionally you need a parallel session at least, so that a user can access the clients at the same time (independent of the number of parallel sessions several masters are able to access in each case a client at the same time). The master module may be started also on as many different workplaces as desired and it is free of installation.

## Support and Maintenance Contract (from version 2.5 on)

Fastviewer grants to his customers the following software maintenance and support achievements with the existing support and maintenance contract:

- Deployment and supply of current updates within the agreed product types during the contract period.
- The deployment of the software versions are taking place immediately, as soon as available in principle as download at your personal customer portal at [www.fastviewer.com](http://www.fastviewer.com).
- Preferential support and hotline service of the producer (during the business hours)
- Guarantee of the world-wide fastviewer server structure
- Information service (by email or telephone inquiry)

Mandatory conclusion of a software maintenance and a support contract about twelve month with three-month term of notice. For the first appointment the software maintenance and support achievements are rendered free of charge in the first year. Starting from the second year the charge for one year for the software maintenance and support achievements amounts 15% of the net list price at the time of the acquisition. With existing contracts the computation ensued with beginning of the next maturity. With subsequent orders the free contribution of the software maintenance and support achievement up to the cost-relevant maturity of the first appointment is granted. The dedicated server does not flow into the calculation base.
